Mechanical diameter sorting machine

Our CGM sorting machine is a simple, affordable yet very accurate and fruit-friendly grading solution for smaller and medium-size cherry producers.

The standard installation consists of a raised platform/feeding belt where the picking boxes are discharged and where the cherries can be manually separated.

From the feeding belt the cherries are brought onto 5 sets of rotating shafts with step by step reduced diameters. Four discharge belts take the sorted cherries to the packing tables.

- **Accurate and fruit friendly**
- **Affordable**
- **Compact**
- **Very reliable**

Standard configuration:

- Feeding belt (3000 x730 mm),
- 4 size exits with packing belts
- Diameter sorting 18-22, 22-24, 24-28, 28-32 mm and oversize 32+
- Capacity \pm 400 kg/hour
- Separator for undersize and rubbish

Options:

- Raised working platform
- Stepped box platform
- Digital balance scales
- Elevator (photo right)
- Set of spacers to sort a different range of diameters
